Vision statement of the College

To produce dental graduates par excellence equipped with professional excellence, patient centric approach, knowledge and skilled clinical practice following footsteps of Mohtarma Fatima Jinnah.

Mission statement of the College

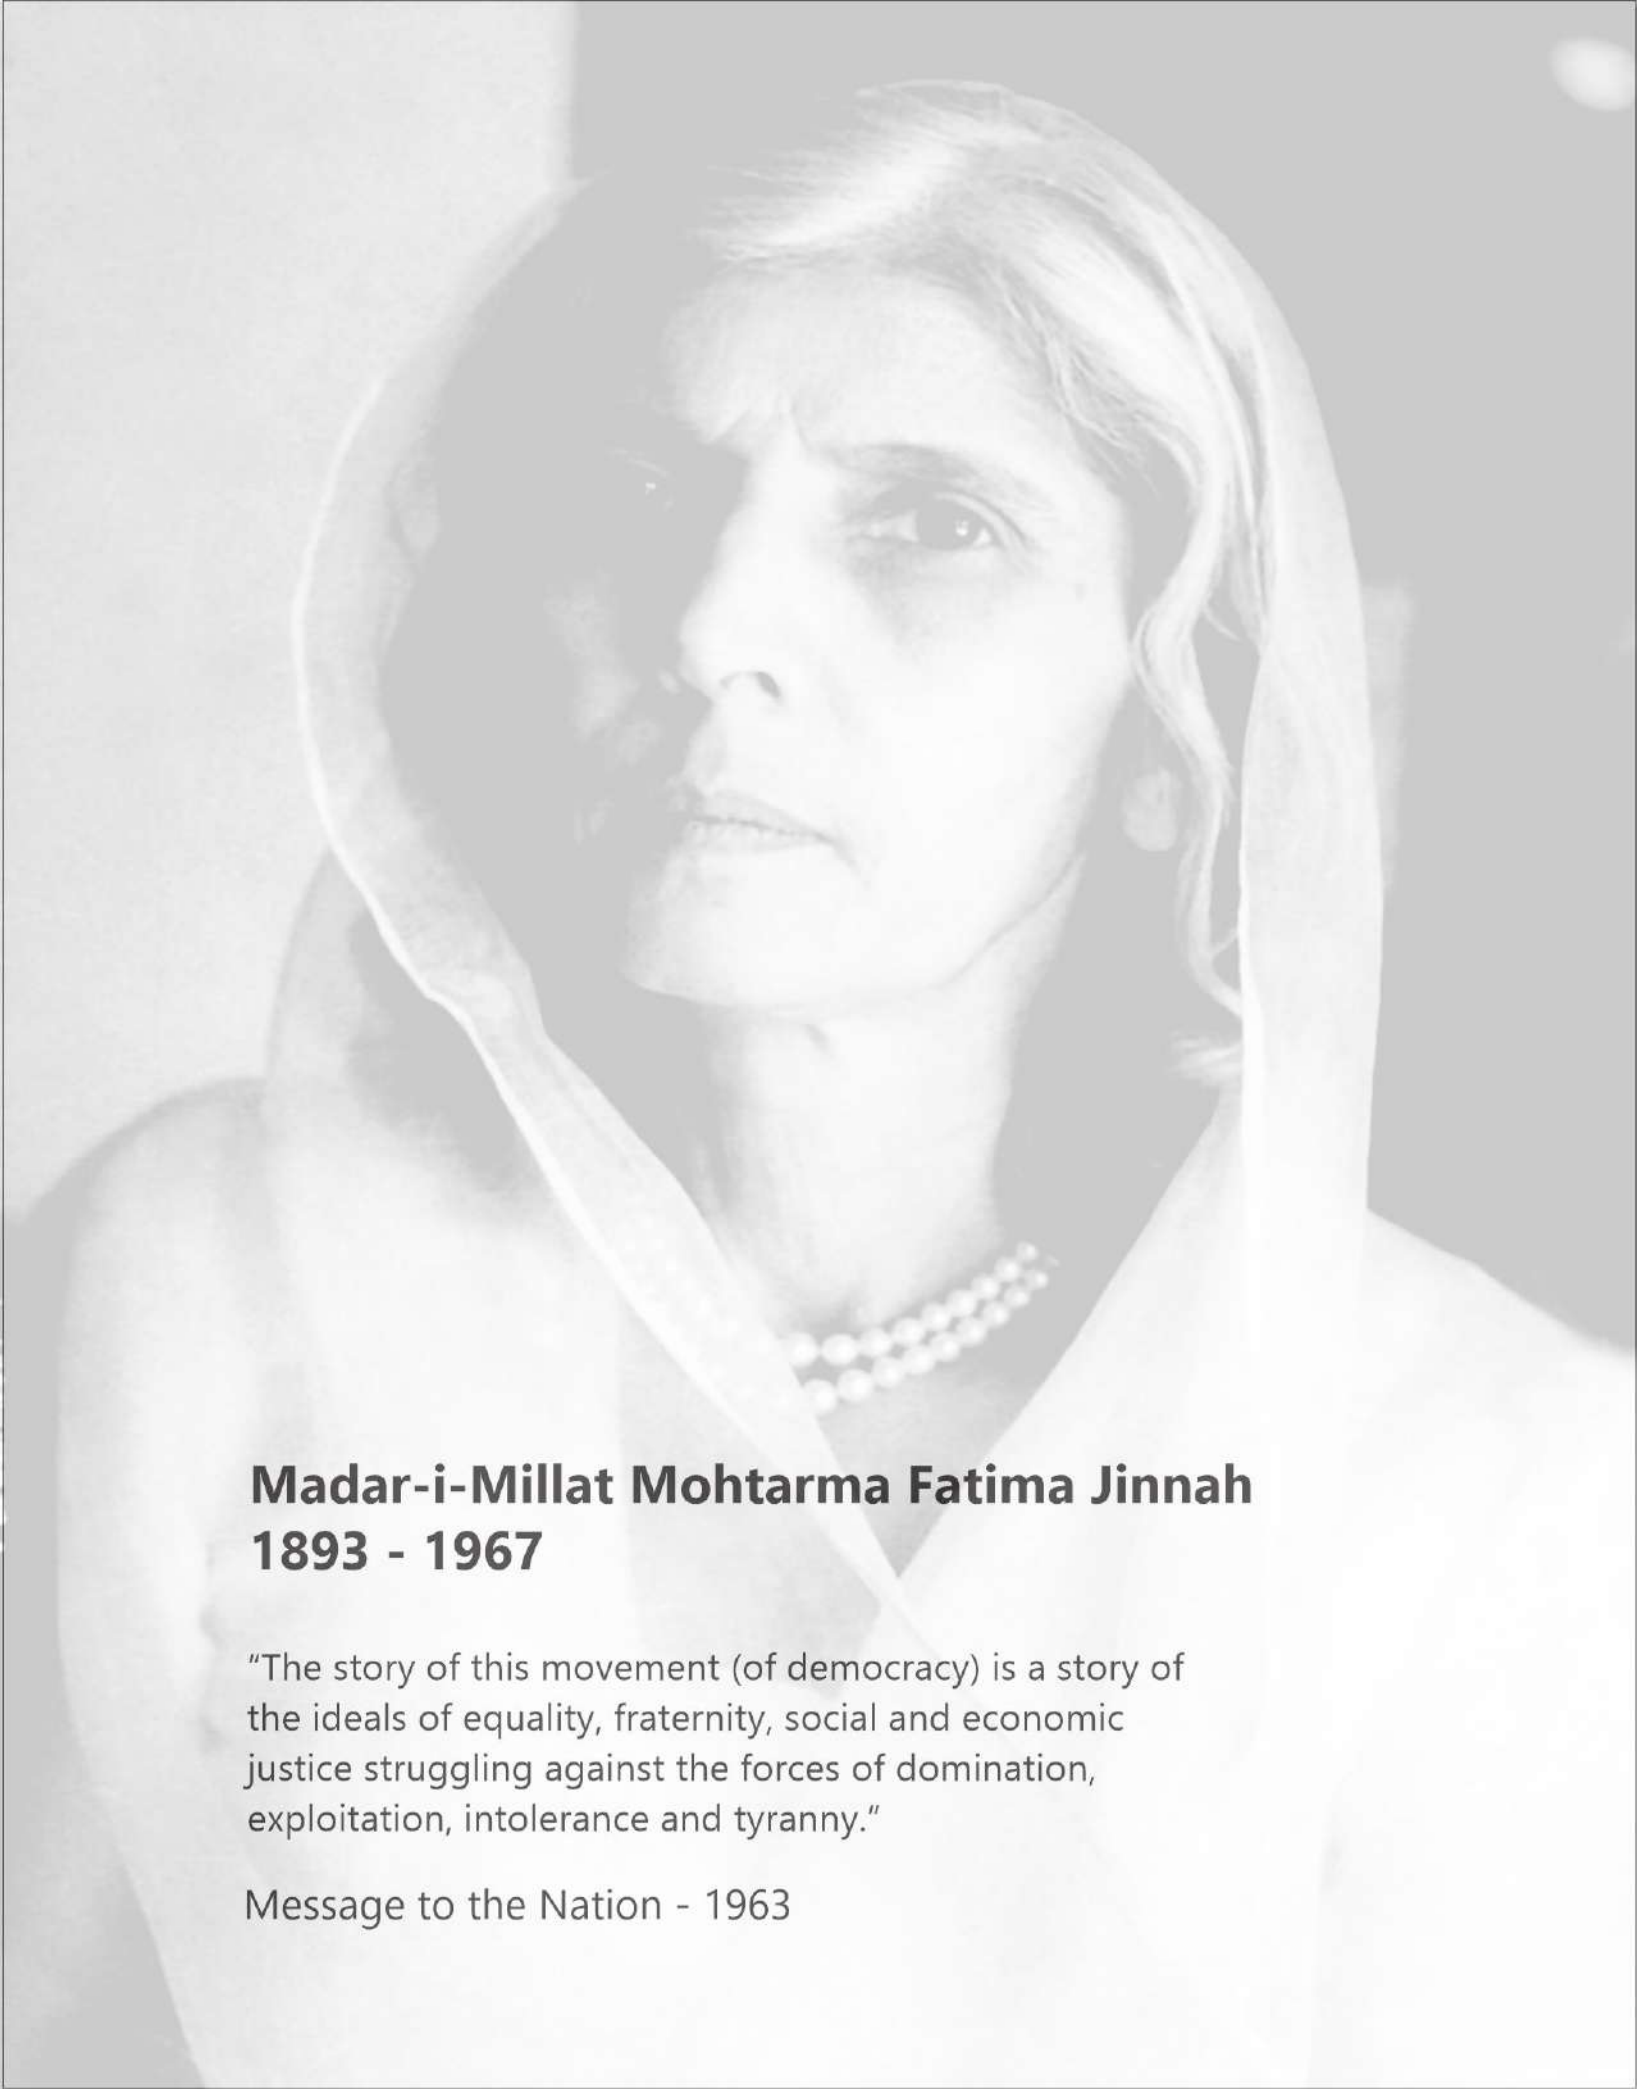

To provide advanced oral healthcare through excellence in teaching methodology, clinical education, research and innovation for the promotion of patient centric approach within the community following professional and ethical standards.

Program Outcomes of the College

At the end of 4 years of BDS, graduates of Fatima Jinnah Dental College will be able to:

1. Provide comprehensive oral healthcare of the highest standard with acquired knowledge, demonstrating advanced clinical skills, compassionate patient care.
 2. Adhere to ethical principles, accountability, and a commitment to lifelong learning and professional development.
 3. Apply research methodologies, and contribute to the advancement of dental knowledge and practice through scholarly activities.
 4. Design, implement, and advocate for community-based programs that improve care for the community.
 5. Communicate and collaborate effectively with other healthcare professionals to provide comprehensive patient care and contribute to a well-coordinated healthcare system.
- 

Madar-i-Millat Mohtarma Fatima Jinnah
1893 - 1967

"The story of this movement (of democracy) is a story of the ideals of equality, fraternity, social and economic justice struggling against the forces of domination, exploitation, intolerance and tyranny."

Message to the Nation - 1963

The FJDC Story

With intimation to the Federal and Provincial Ministries of Health, the PMDC and the University of Karachi and after necessary documentation, Fatima Jinnah Dental College was born on the map of Pakistan. It is a pioneer institution devoted to the teaching of dentistry, independently and not as a department of any medical college. The College is named "Fatima Jinnah Dental College" to pay respect and homage to the memory of Late Mohtarma Fatima Jinnah, who was herself, a Dentist. The Mohtarma, sister of Quaid-e-Azam Muhammad Ali Jinnah, qualified as a dentist in early part of this century in 1922, in undivided India. Due to her devotion to the cause of creation of Pakistan, she sacrificed her professional & personal life. She was honored by the title of "Madar-e-Millat"(Mother of the Nation), by which name she is still fondly remembered. The establishment of this College is also the fulfillment of the promise made to Late Miss Fatima Jinnah by Dr. S. Baqar Askary, the Chairman, and founder of this College, in 1964, when he was president of Student's Union, Dow Medical College and president National Student Federation (NSF), during the Mohtarma's struggle for democracy. It took a long time, but by the Grace of ALLAH, the dream is a reality today. This college was established in the University of Karachi academic year 1992-93. It is significant, that 1993 was the centenary year of the birth of the Mohtarma and the establishment of this College was a gift to the Nation on this auspicious occasion.

59 Years Ago

Mohtarma Fatima Jinnah

inspecting a large size portrait at the Mohatta Palace presented to her by Dr. Baqar Askary, who was president, Dow Medical College Student's Union and president, National Students Federation, seen standing on extreme right. It was then the Mohtarma expressed her wish for a Dental College in Karachi. This photograph appeared on the front page of daily "Jung" on December 31st 1964.

30 Years Ago

Fatima Jinnah Dental College

Dr. Baqar Askary addressing a Press Conference on 20th, Feb. 1993 while presenting the College to the Dental and Medical Community and the media. Late Syed Hashim Raza, Chairman, FJDC Trust, was also present on the occasion.

Today

Dr. S. Baqar Askary, Chairman FJDC presiding over a college event.

Difficulties Surmounted

The establishment of a private professional educational institution, particularly that of an undergraduate dental college is a gigantic task. The sponsors have to acquire suitable premises, furnish them adequately, develop laboratory and library facilities, appoint qualified faculty members and build its own dental and general hospitals, to get Recognition of its BDS Qualification from Pakistan Medical & Dental Council as well as Affiliation to the University. Besides, a sizeable number of qualified students are also to be attracted to compete for admission in the College. Assemblage of such financial, physical and human resources is a great challenge. Particularly collection of highly qualified and experienced faculty, of which there is acute shortage in Pakistan and its retention by providing them attractive pay package and career structure, pose formidable problems. Besides, procurement of hospital equipment, dental chairs and professional books and journals is a very expensive proposition. Only sponsors of un-impeachable character who have sound credentials and antecedents and who have earned a vast reservoir of credibility because of their

outstanding contribution in different walks of life, particularly in education and medicine, with continuous hard work and dedication, can hope to acquire success in fulfilling the above mentioned requirements. Such ventures require sound and meticulous financial and administrative planning to create required facilities and to continuously improve, upgrade and update them. It is imperative for the college to develop vital linkage with the medical, dental and educational establishments and society at large, on whom the college depends for persistent support and resources, vital for its continued existence, growth and development. In conclusion, it would suffice to say that the establishment of a dental college in a developing country, is an arduous and complex process, requiring highest degree of contribution and enthusiastic co-operation on the part of all those who happen to be associated with it, in the capacity of sponsors, administrators, teachers, students, parents and other relevant segments of society. And when requisite level of support is forthcoming from such diverse elements the efforts to establish a dental college is destined to be crowned with success.

The Success story of the establishment of Fatima Jinnah Dental College has been kept alive and continues to progress by constant struggle to keep abreast of ever changing criteria and requirements imposed abruptly, by the wranglings of the various authorities having power over such institutions. FJDC is today a shining star, with torch alight and the flag flying, for the onward march.

Fatima Jinnah Dental College was the First Private Dental College to be permanently recognized by the PMDC. Late Syed Hashim Raza, Chairman and Dr. S. Baqar Askary CEO, FJDC & Hospital Trust, exhibit the PMDC shield of recognition on 27th February 2001.

Message from the Chairman

Keep the Flag Flying for the Onward March

To reach the stage of welcoming the 32nd Batch of students, the College and those at the helm of its affairs, went through an unprecedented era of turbulence, sailed over rough and stormy seas and troubled waters before coming through to be established as, undoubtedly, a dental college of high standards in Pakistan.

This has been possible by the principled stand on all issues that mattered, directly or indirectly, to the survival and onward march of the College, to where it stands today. Success and success in all fields and spheres, has been the hallmark. The efforts to keep the College and its ideas afloat, despite insurmountable odds and unpredictable circumstances, made it to fly higher and higher, to unfettered heights.

The College has, in the shortest possible time, established itself in the field of academics, clinical skills, administration, discipline, honesty and self-reliance. This has been acknowledged by none other than the University of Karachi, the Pakistan Medical & Dental Council, HEC and the College of Physicians & Surgeons, Pakistan, and that too in writing, by all these statutory and medical and dental education regulatory bodies. We have the will to go on and scale new heights. Stagnation leads to decadence and finally to decay. We surely do not want that to happen.

With the entrance of a new set of students and with their resolve, the onward march has to continue. The light at the end of the tunnel, beacons. All has been geared up and tuned for the maintenance of what has been achieved and for acceleration to new heights for the onward march, keep the flag flying.

Dr. S. Baqar Askary

Chairman & Head of the Institution,
Fatima Jinnah Dental College & Hospital.

Message from the CEO

FJDC Offers not just a degree But a promising career.

At Fatima Jinnah Dental College, we are committed to educating the whole individual in a positive and progressive learning environment. To make this mission a reality, our highly qualified teachers instruct students under a rigorous program and with the belief that all students can learn.

Fatima Jinnah Dental College & Hospital since the beginning has been acknowledged by all for its dedication in producing top-notch dental surgeons in Pakistan. Today FJDC is a matter of pride for the entire Nation. Internationally, it is known for the high standard of clinical training and production of well-rounded and polished professionals. All this has been made possible by 32 years of hard work. No avenue is ever lost. No opportunity is ever missed. No innovation is ever left out. From the Pre-BDS Foundation Classes till the end of the house job, they receive individual attention and care.

As CEO, I believe it's important to foster intellectual, professional and personal growth through selected combinations of basic education and skills development. Our programs provide a solid foundation for a lifelong performance and learning. Each student is guided and encouraged to reach to their full potential, becoming leaders and success stories. Being a product of this very institution and a faculty member for the last 21 years, I assure you that every entering student will become a part of the FJDC family and will share its legacy.

Thank you and wish you all the best!

Dr. Syed Hussain Askary
BDS, MSc.(UK), DDPH, RCS (England).
CEO and Head of Department
Community Dentistry, FJDC.

Welcome from the Principal

Fortify your future

Join FJDC

Fatima Jinnah Dental College is the premier private dental college. It was established in 1992 and has 32 years standing. The institute has steadily evolved since then and has been able to keep up the meritorious progress. To date 1800+ students of this college have graduated and acquired the BDS degree from the internationally acclaimed University of Karachi and now continues with Jinnah Sind Medical University. They have attained positions and gold medals, not to forget a record number of distinctions in various subjects at professional examinations of the Universities.

The high academic learning at FJDC is attributed to the highly qualified and motivated faculty. Innovations and improvements in teaching methodologies, newer programs based on modules and problem-based learning are just some of the improvements.

The dental hospital of Fatima Jinnah Dental College maintains a high standard of clinical teaching and training for which it is known in professional circles, both at national and international levels. It plays an important role in providing dental health care to the less fortunate and deprived members of the society, at very affordable costs.

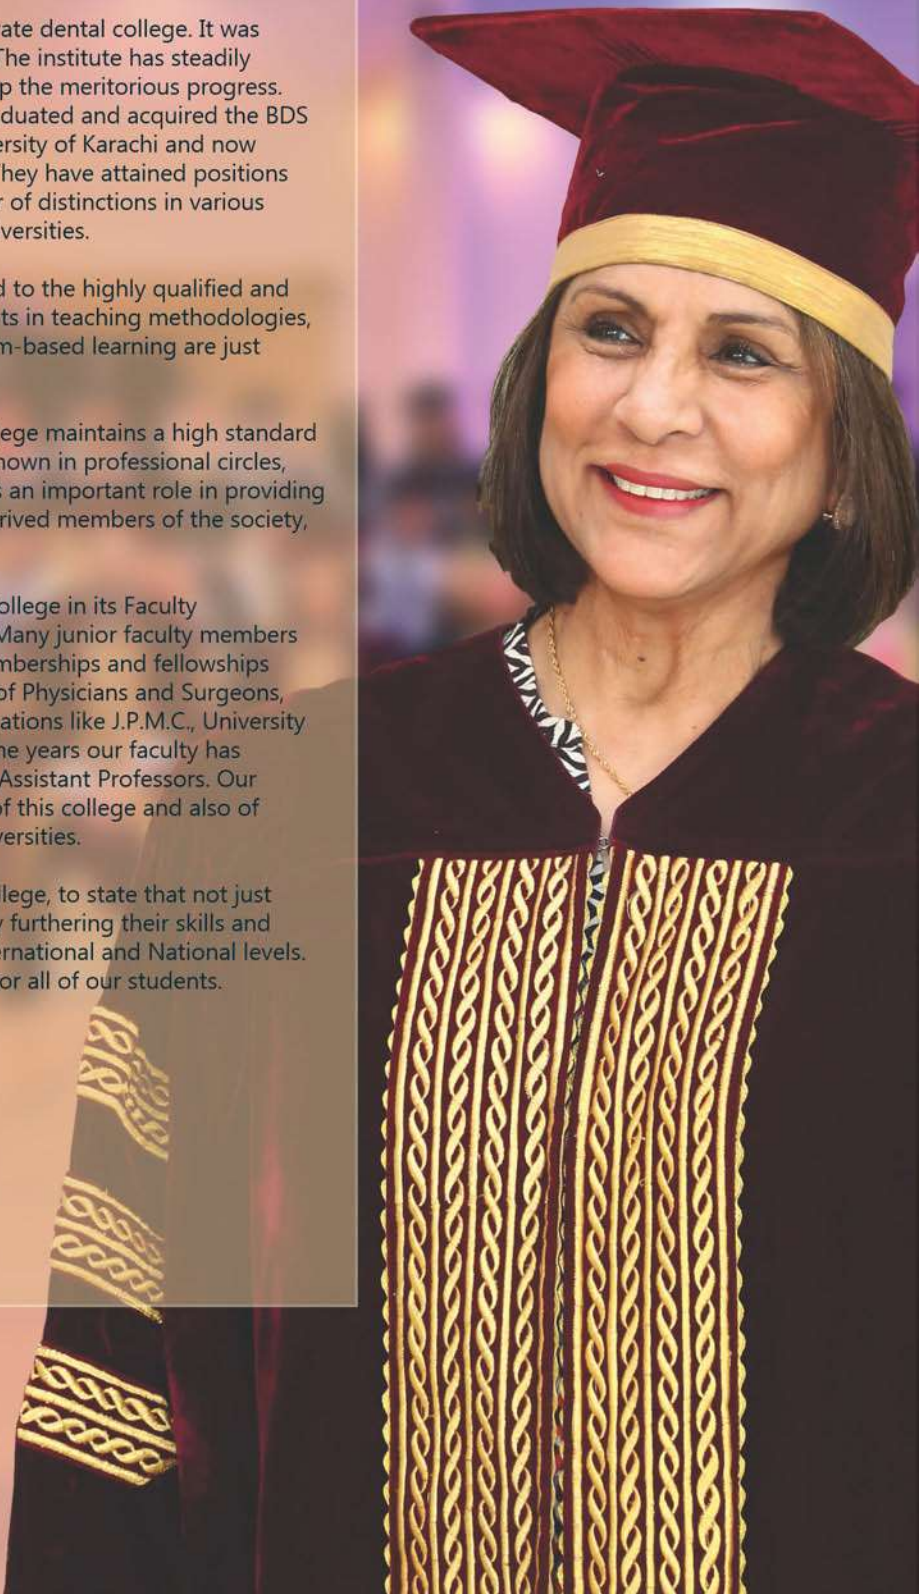

Post-graduation has been encouraged by the College in its Faculty Development Program from its very inception. Many junior faculty members and graduates of this college have attained memberships and fellowships from the Royal College of U.K. and the College of Physicians and Surgeons, Pakistan, M.Phil and PhDs from reputed organizations like J.P.M.C., University of Karachi and the Punjab University etc. Over the years our faculty has acquired positions of Professors, Associate and Assistant Professors. Our post-graduates have fortified faculty positions of this college and also of many other prestigious dental colleges and universities.

I feel proud and honored, as Principal of this college, to state that not just our graduates but even our Faculty is constantly furthering their skills and knowledge and many have excelled both at International and National levels. Our mission is to enrich lives and build futures for all of our students.

Prof. Dr. Tasleem Hosein

Fatima Jinnah Dental College, in 1993

Sponsored the First Overseas

WEST ASIA EXAMINATION FDS RCS (PART-I)

By Royal College of Surgeons of England in Pakistan

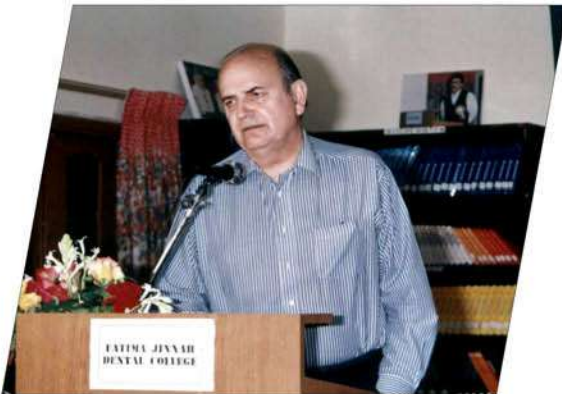

Under the Auspices of British Council Karachi.

FJDC realized the paucity of dental specialists available in Pakistan for the already functioning 5 dental colleges in the public sector. In its quest to be an institution with proper qualified postgraduate faculty for quality teaching and training of the required standard, took upon its self this ambitious program.

The Royal College designated Dr. D. A. Luke, Dr. John Rayne, Prof. W. M. Edgar, Dr. B.K.B. Berkovitz, Dr. C. Franklin for executing the teaching and training program with preparatory courses for the participants Mr. Ray Yates, Principal Examination Assistant held the examination at the British Council.

Those qualifying were offered part II training attachment in England under a Dental Assistance Program.

It is on record that, because of our efforts, the CPSP, for the first time since 1994, initiated post-graduation in dental subjects by inviting experts from Singapore.

Dr. Johan Rayne gives his impressions on the first FDS RCS Part I examinations in Pakistan, at Fatima Jinnah Dental College.

Dr. Mervyn Hosein Coordinator of the Program speaking at a dinner in Fatima Jinnah Dental College.

Dr. D. A. Luke conducting the preparatory course for the F.D.S. R.C.S. Part I Examination at Karachi.

Dr. Roger Linden Lecturing the students in Fatima Jinnah Dental College.

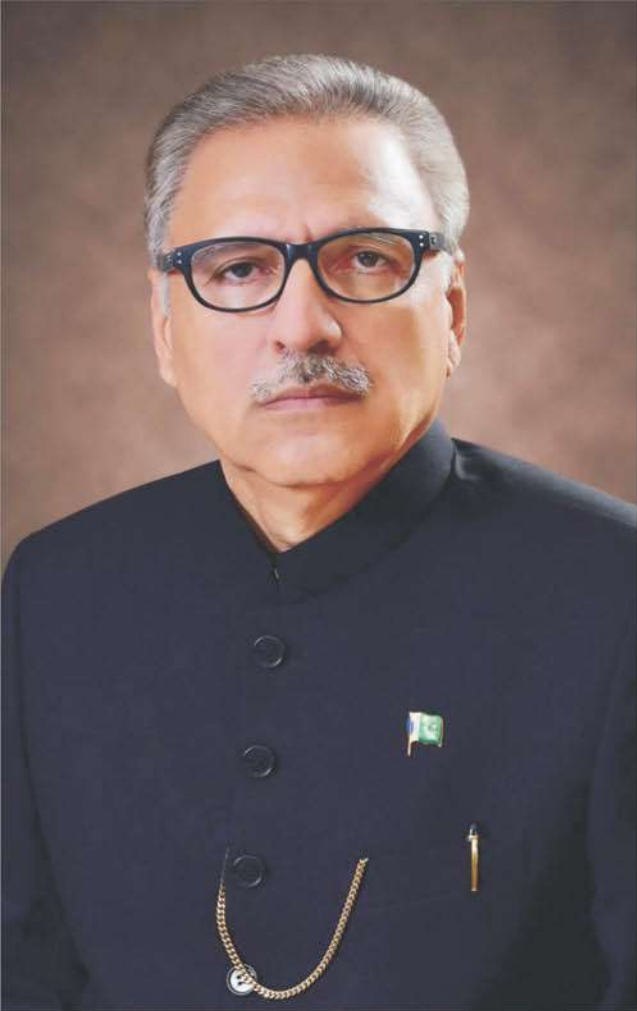

FATIMA JINNAH
DENTAL COLLEGE
1992 - 2023

Coming soon : 32nd Anniversary Celebrations

In the last 32 years, the College has produced over 1800 dental surgeons of high quality with outstanding performance, and of international standard. Faculty Development Program (FDP) has produced numerous Professors / Associate & Assistant Professors in various basic sciences, medical & dental clinical subjects, with MCPS, FCPS from CPSP and Ph.D., M.Phil., M.S., M.Sc. etc. from various national and international universities.

Cake cutting ceremony 25th & 20th Anniversary Celebrations

Valuable Opinions

Dr. Arif R. Alvi,
Chief Guest.

With my efforts as a representation of Pakistan in the FDI World Dental Federation, that 20th March was designated as World Oral Health Day. This day is also celebrated as Nowruz, the beginning of spring. As such, we should keep our mouth and teeth fresh and clean. Oral Health Day or even a week should draw our attention to this need.

There are various segments of society present, school children, dental students, teachers and parents. The leadership of Pakistan Dental Association organizing this day is present in full strength. We all have to work in symphony for prevention of dental diseases. We cannot afford treatment when lesser amount is needed on prevention of dental diseases.

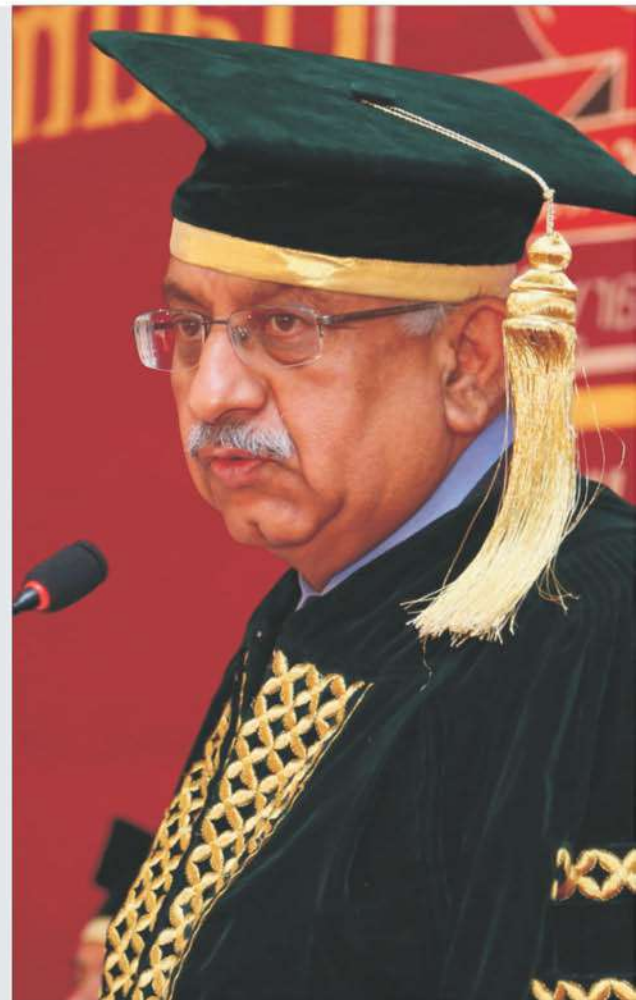

I am thankful to the PDA to have me as the chief guest for the inauguration of World Oral Health Day in Pakistan and Dr. Baqar Askary to host this occasion.

Prof. Dr. S. M. Tariq Rafi

Vice Chancellor, Jinnah Sindh Medical University,
Chief Guest

It is an honour for me to appear as Chief Guest at this Convocation. I feel truly humbled by the trust placed in me. This convocation is a time of celebration on two counts. One, for the successful graduates of today from Karachi University and the productive and mutually beneficial completion of 25 years at this university. The second, for the change over of the college affiliation to JSMU. You have achieved great success with the guidance and support of K.U. I pledge full support of JSMU, the biggest medical university in Sindh and second in Pakistan, with highest number of affiliated colleges and students. You stand to benefit from our dedication to medical education.

Affiliating FJDC is a complement for JSMU as it is a pioneer institution of dentistry and has contributed immensely in raising the standard of dentistry in the country.

Valuable Opinions

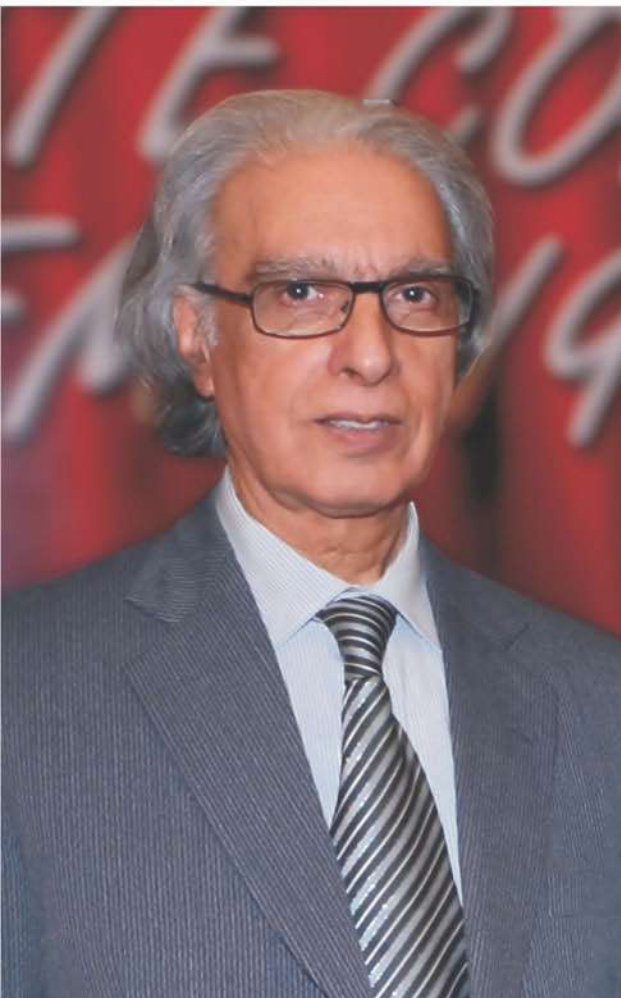

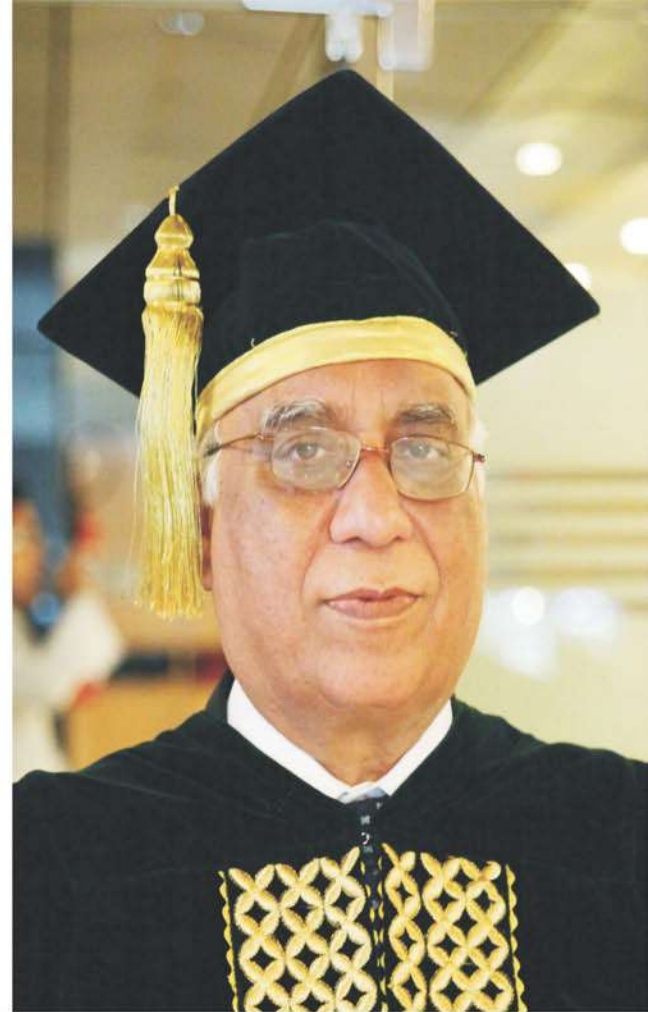

Prof. Dr. Mohammad Qaisar

Former Vice Chancellor,
University of Karachi,

“In this short span of time FJDC has established itself on permanent and firm grounds. It is primarily an under-graduate institution for BDS but has played a leading role in Faculty Development and Research.

FJDC has contributed more than its share to the advancement of dentistry in Pakistan. Being the pioneering dental college in the private sector and sixth in the country.

Fatima Jinnah Dental College has acted as a beacon of light for those who followed later on. There are a total of 33 dental institutions functioning in the country today.”

Prof. Dr. Pirzada Qasim Raza Siddiqui

Former, Vice Chancellor, University of Karachi,
Vice Chancellor Ziauddin University,
Chief Guest

“There is not even one dentist per ten thousand people in Pakistan. Oral Health plan had been chalked out by successive governments but there is no implementation of any kind nor has health and education been a priority.

Under these circumstances Dr. Baqar Askary, who had been a student leader, not only established a dental institute but has also managed it with great expertise, without any support and under most unfavorable environment. The graduates of this College are an asset for the Nation. Only through well educated and trained human resource can we ever bring about the necessary change.

I present Dr. Baqar Askary: “Kheraj-e-Tehseen” for this exemplary contribution and request everyone to support his efforts.”

Valuable Opinions

Prof. Dr. Syed Arshad Husain (Late)

Chief of Child and Adolescent Psychiatry,
University of Missouri, Columbia, Missouri, USA,
Chairman American Psychiatric Association's
Committee on Psychiatric Dimensions of Disaster.
Chief Guest.

"Up till 20 years ago there was no dental college in Karachi. Dr. S. Baqar Askary who had pressed its need and articulated his vision to establish a dental college. However, he received no encouragement from any university or the medical profession; to which I, myself, are a witness. Like a true visionary. Dr. Askary pursued his dream with tenacity and resolve and succeeded in founding, in 1992, the pioneering dental college in Karachi.

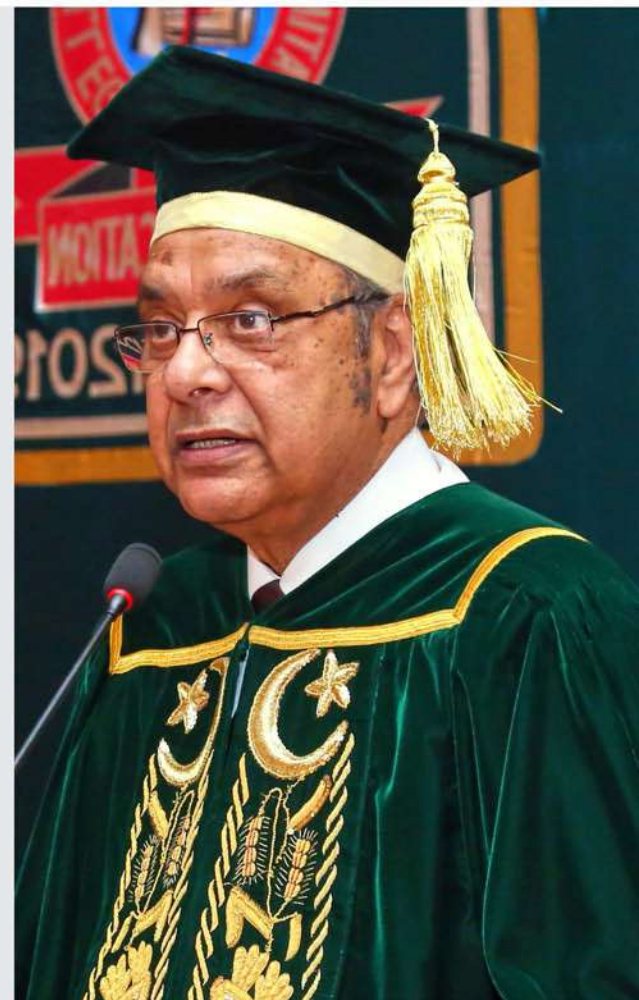

Presently by all accounts I know that Fatima Jinnah Dental College is one of the best if not the best in the country".

Prof. Muhammad Ajmal Khan (Late)

Former Vice Chancellor, University of Karachi.
Chief Guest.

Fatima Jinnah Dental College is the institute for Legacy of Mohtarma Fatima Jinnah, and is a prestigious and renowned institution in its own right. It has contributed a large share in the advancement of dentistry in Pakistan. Being a pioneer institution in the private sector and the 6th dental institution of the country, it has acted as a beacon of light for those which came later. I would advise them to follow the footsteps of FJDC and take advantage of their experience for the exemplary journey to their success, specially their role in faculty development.

The principal in her annual report pointed out that a large number of research projects having been completed and an equal number are presently being undertaken by the faculty. It is indeed an achievement of faculty of any institution. Researches are backbone of human progress. It provides a lifetime of information for others to follow and improve upon. It is encouraging to note that the latest laser technology in dentistry has been introduced at the college for better patient care. Please keep it up.

Valuable Opinions

Justice (R) Fakhruddin G. Ibrahim (Late)

Chief Guest.

Delivering an invigorating and thought provoking address, he recounted the dreary political and judicial happenings of the past and the deteriorating present situation. He gave a harbinger of good tidings for the future, based on the young generation being represented by the graduates of today.

"I categorically state that my generation has utterly failed the Nation. This institution is run by progressives and nationalism should be imbibed in you.

We look forward to you for salvation. You are the future of this country. Speak up and be counted now, or it would be too late."

Dr. S. M. Rub, (S.I) (Late)

Prof. Emeritus, University of Karachi,
Former President, CPSP, Renowned Physician.
Chief Guest.

Pointing towards the impressive assembly of the faculty, said

"This is a faculty! The faculty of FJDC here; it's hard work and dedication speaks for itself. They remind me of the legendary Guru Dorna mentioned in Mahabaharta, his trained archer named Ekalavya who could be recognized by his skills, which were of the highest level, He could split an arrow with another in mid-air. Yet when time came for Gurudakshna (tradition of repaying one's teacher) the Guru ordered Ekalavya to cut off his right thumb. He complied.

I am not saying this should happen today, but this College deserves to be acknowledged and respected as much."

Why Choose FJDC

Four year course with Jinnah Sindh Medical University Degree. Over 32 years of dental teaching experience by highly qualified, dedicated and vibrant faculty, backed by sincere, committed and progressive administration. Leaders and trendsetter in dentistry. Unique pre-dentistry foundation program for new entrants. Highest academic and clinical reputation. Comprehensive faculty development program. Unparalleled clinical training, leading to superb patient care. Become part of Fatima Jinnah family, enjoy support of over 1800 strong alumni, holding important assignments across the globe. Be a part of the FJDC success story.

Campuses

Fatima Jinnah Dental College Pre-Clinical Campus

Dedicated to the teaching of basic medical & dental subjects of 1st & 2nd Professional Years, with safe and comfortable environment. With no commercial activity and no distractions.

Fatima Jinnah Dental Hospital Clinical Campus

Strategically situated at Azam Town, adjacent DHA, providing high standard of patient care on non-profit basis since the last 32 years. Provides accumulated data and valuable statistics for research.

Fatima Jinnah Executive Clinics & Implant Center

This Center Of Excellence has latest & highly sophisticated facilities for prompt treatment, at par with international standards with additional of laser machine Lasotronix it offers advance training in dentistry and provides employment opportunities to our graduates.

Azam Town General Hospital of Fatima Jinnah Dental College Medicine & Surgery

Worthy endeavor by Fatima Jinnah Dental College and Hospital Trust - a valuable addition to the city's health care infrastructure. Especially geared for the teaching and training of the students of 3rd Professional BDS Classes.

PRE - CLINICAL CAMPUS

In 1999 a State-Of-The-Art Campus was built at Korangi Creek. Over the years this locality provides safe and peaceful environment to many prestigious schools, colleges and institutes. It has now developed into an educational enclave.

The Pre-Clinical Campus is acknowledged by all for its suitable design and functionality. It has spacious air conditioned lecture halls. Each Department has Laboratories, Seminar Area, Museum, well stocked Library supported by an I.T. Centre, with high speed internet video conferencing system, providing the faculty and students with video lectures, e-books and over 8000 medical journals. This campus also houses an air-conditioned auditorium with capacity of 400 persons. The auditorium is a popular venue for various Students Activities, Social Events with numerous National & International Medical and Dental Seminars & Conferences, hosted by FJDC and Pakistan Dental Association.

Admission Office

The Pre-Clinical campus houses the admission office. For admission details visit our website or contact Mr. Rameez Dar, 03213337321

Why Pre - BDS (Foundation) Program

Many universities of repute in USA and UK run pre-medical and pre-dental courses. Fatima Jinnah Dental College holds foundation classes since 2006, to make those admitted, better equipped, knowledgeable and receptive to the BDS course of studies. It includes enhancements of communication skills, IT and research.

The Problems:

Education in Pakistan has been unplanned and un-imaginative towards its needs. Secondary Education System is outdated, unattractive and ineffective. Students are unable to cope with the higher standards and pressures of professional education due to lack of basic knowledge and skills.

The Foundation Concept:

The concept of a foundation program is new and the first of its kind in Pakistan. As the name illustrates, the foundation program is intended to offer classes and courses to students who are about to start their professional education. As such, students have fulfilled the requirements of getting admission into a professional college can join this program. At present, we are offering these courses for those wishing to join Fatima Jinnah Dental College. We are planning to broaden the range of students so that students who are seeking admissions in other professional institutes can also join this program and benefit from the enriching experience.

FATIMA JINNAH FOUNDATION COLLEGE (FJFC) offers a complete program designed to enrich the young minds with proper knowledge and guidance required to pursue a professional career. The program has been designed to utilize the time of the students who are waiting for their results after their intermediate examinations and the beginning of the session, once they are admitted to a professional college.

PRE-BDS FOUNDATION COURSE OUTLINE

The Foundation Concept : The curriculum followed here is a comprehensive one. Besides basic health sciences and concepts of anatomy, physiology, biochemistry, pharmacology, pathology and microbiology subjects are taught together with medical terminology and computer skills.

Students are provided a friendly and progressive yet competitive environment, where they receive the proper guidance and a chance to build skills required to survive and excel in the medical profession.

"Developing soft skills, such as communication and updating knowledge through group discussions, are essential for doctors"

Fatima Jinnah Dental College, CEO

Dr. Syed Hussain Askary

Student Salman Ahmed felt that the white coat ceremony at the beginning of the session increases one's responsibility towards studies. "The condition of healthcare facilities in the country is at its lowest level but it also means there is room for growth and opportunities."

Published in The Express Tribune, December 29th, 2012.

1st Professional BDS Subjects Anatomy

Science of Anatomy deals with the structure of human body. The first year BDS program requires this as an essential subject, because without proper knowledge of the anatomical structures, it is impossible to understand how the organs function and the body movements take place. The department consists of a highly skilled and trained faculty. The science of Anatomy has subdivisions of Histology, Embryology, Gross Anatomy and Neuroanatomy. The students are taught detailed functional anatomy of Human Head and Neck including the nervous system, embryo development of important organs and the structural architecture of cells and tissues at microscopic level. By the end of the session it is expected that a strong relevant anatomical foundation is laid. Students will have access to microscopes, dissected models and specimens, histological specimens, embryology models, overhead projectors and IT equipment. There is a separate Anatomy museum which has a vast display of anatomical structures, 3D models and a large collection of skulls and bones. The study of anatomy with special emphasis on clinical aspects enable students to develop the basic core of human anatomy in relation to problem based learning.

Biochemistry

The Department of Biochemistry is a wonderland for anyone who loves to work with chemicals and carry out experiments. The department has well trained faculty members who demonstrate the working of different chemicals, their biological effects and interactions between biological and chemical elements. The basic aim is to provide a thorough understanding of the core principles and topics of Biochemistry and their experimental basis, and to enable students to acquire a specialized knowledge and understanding of selected aspects by means of a lecture series and research projects. Biochemistry department has a well equipped laboratory, it has chemical reagents and equipment necessary to teach students to perform various laboratory investigations needed to confirm diagnosis of various diseases. This includes teaching sessions and supervised practical groups imparting training for hematology, nerve and muscle, cardiovascular systems and special senses. Structured modules for each topic including practicals, problem based learning, video lectures and journal clubs ensures maximum student participation.

Physiology

Physiology is the study of how the body works. The systems of the body including the cardiovascular, respiratory, neural, renal, endocrine, gastrointestinal and reproductive systems are examined using approaches ranging from molecular and cellular to whole organism levels.

The Department of Physiology is one of the most well equipped departments in the college. It provides modern facilities and uses latest approaches and techniques to teach the 1st year BDS students all the topics that are in the syllabus. The laboratory is equipped with various instruments including electronic microscopes to carry out physiology experiments. Tutorials are conducted and demonstrations are carried out on regular basis. The department has a complete resource center with many video lectures, CDs, DVDs, posters, books and multimedia facilities.

Oral Biology

The subject of Oral biology has three major areas: Tooth morphology, Oral Histology and Oral Embryology. The students gain knowledge about the structure and development of tooth and its surrounding structures. Dentists apply this understanding for the diagnosis of various conditions associated with oral hard and soft tissue abnormalities. Students study oral histological slides under electronic microscope, and with the aid of 3D models of the tooth and mouth structure. Highly sophisticated equipment is used for tooth sectioning which enables microscopic details to be studied.

2nd Professional BDS Subjects Pharmacology

Pharmacology is the branch of science which deals with the study of drugs and their interaction with the human body. This subject is taught in the 2nd year of BDS Professional studies. The academic staff share a commitment to top-quality teaching which emphasizes general principles and integrates into it the latest findings of modern research.

The course covers the drug groups that are a part of the syllabus set by HEC / PMDC and the University of Karachi. It comprises of pharmacokinetics, pharmacodynamics, general pharmacology, mechanism of actions of different drugs, their interaction and adverse effects on the human body.

The practical work is carried out under the supervision of trained and skilled demonstrators. Each experiment is first discussed and demonstrated and then students

are asked to carry out the drug preparations themselves. The department provides ample facilities to carry out the experiments. The lab work is then charted in a lab journal. Weekly discussions, tutorials and presentations are conducted by the department to promote student participation and one on one interaction. Visits to drug manufacturers / pharmaceutical companies is an essential part of the teaching and training program and gives a first hand knowledge of production of branded medicines.

Dental Materials

Science of Dental Materials is one of the many required courses in the Bachelor of Dental Surgery (BDS) Program. It is important to understand the fundamental properties, composition, chemistry of dental product, behavior of dental materials in the delivery of quality patient care. A dentist must understand why specific materials behave as they do and why they are used for certain application in certain locations to treat the oral-dental diseases. Therefore, undergraduate dental students studying Science of Dental Materials will gain knowledge to understand the scope of dental materials' structure and properties relationship, careful manipulation and clinical correlation of dental materials. Students will learn how to use various materials like waxes, wires, acrylic to make dentures, and use silver mercury, composites and other such materials for various dental treat-ments. The dental material laboratory of FJDC is an exceptional setup which has been used as an example by other institutes. The students will also work on high-tech phantom heads, which simulate the real oral cavity, complete with mouth and teeth, on which students can hone their skills.

Pathology

The subject of pathology is the science which deals with the study and diagnosis of diseases afflicting the normal healthy cells. The department of pathology has separated the subject into three main categories: General pathology, Special pathology and Microbiology. The division of the subject helps to focus more on each area. Separate labs/experiments and tutorials are conducted for each division. The students are taught the subject thoroughly putting more focus on general pathology and microbiology.

Pathology is an exciting discipline because it transcends the traditional boundaries between basic and clinical sciences. With advances in molecular biology, the completion of the human genome project, and development of sophisticated technology such as next generation sequencing and proteomics. We are poised to understand the pathogenesis of human diseases at the molecular level.

Community Dentistry

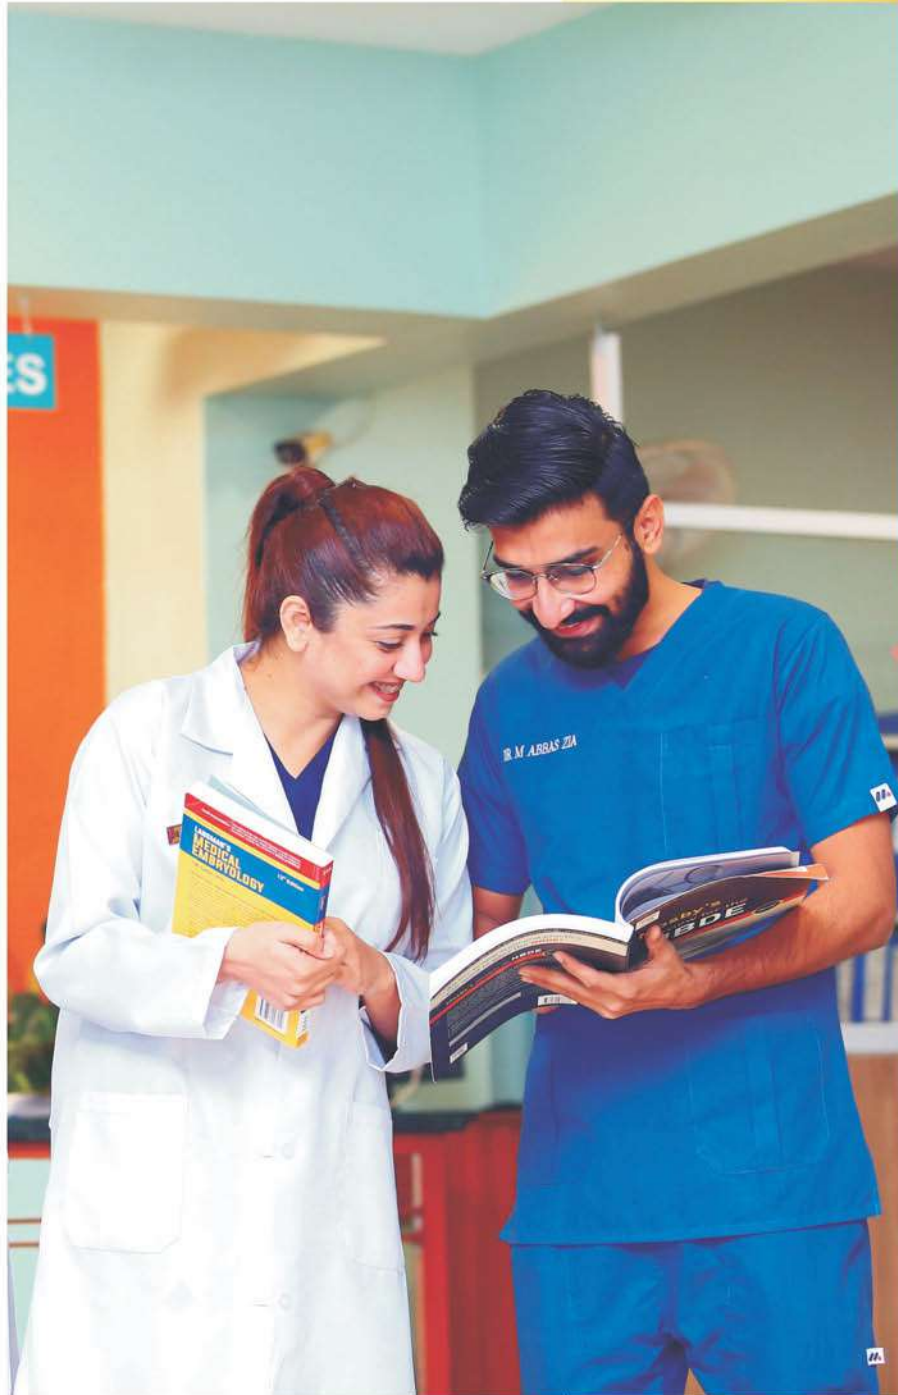

Community dentistry is a subject taught by the department of Public Health. Oral health problems are a major health dilemma in our society. This is mostly due to lack of oral health awareness amongst the population especially those with low socio-economic status. The goal of this dental specialty is to increase oral health awareness in our society thereby preventing the occurrence of such problems.

The department works alongside the Ministry of Health, NGOs like SOS Village, Salvation Army, World Health Organization (WHO) and others. Various aspects of research are also taught to the students. Students also enjoy visits to various health related industries. Many projects are conducted here by various international universities. The students are made to visit different schools,

communities and public places where they provide free dental checkup to the patients and demonstrate preventive procedures. Creating health awareness and educating the masses is carried out to control the curative burden on a limited health allocation in the national budget.

Clinical Campus

The clinical campus comprises of two separate buildings facing each other on 100 Foot Road, Azam Town, adjacent to Phase I, Defence Housing Authority. Here the clinical dental teaching and training is undertaken with great enthusiasm and the students are exposed to a large number of cases on a daily basis. The adjoining localities make up a very healthy catchment area, where the hospital is within easy reach for over two million people. This strategic location together with the excellent reputation, spanning over 32 years of clinical care, make it a top dental training centre in Pakistan. The other building is the recently developed Azam Town General Hospital, which has been specially geared up for the teaching of general medicine and general surgery to the third professional BDS students. This facility is for the training and teaching of BDS students alone and not to be shared by MBBS students. The exposure to medical and surgical cases is maximized. This unique advantage ensures highest standard of unmatched education, clinical teaching and training.

3rd Professional BDS Clinical Subjects

Periodontology

The department of Periodontology provides periodontal care to the community, where diseases of the gums and the related soft tissues are diagnosed and treated accordingly. Students are taught the basics of periodontology, learning how to prevent, diagnose and treat periodontal problems of all types. Students are also exposed to a variety of oral problems, and carry out treatment like dental scaling and polishing, deep curettage, root planing and perio surgeries. The department has a large flow of patients and provides optimal, comprehensive periodontal care for the highly diverse population, with rigorous quality assurance and patient satisfaction.

Oral Medicine

The department of oral medicine deals with patient care, teaching and research involving diagnosis and non-surgical management of diseases of the orofacial complex and systemic and behavioral disorders that impact oral health, including: Orofacial pain, temporomandibular disorders (TMD), Mucosal diseases, Oral cancer and complications of cancer therapy, Dental care for patients with disabilities, Salivary dysfunction, Oral complications of systemic illnesses, Craniofacial imaging and other diagnostics and dental emergency care. Management of any condition or lesion includes careful diagnosis by means of radiographs, biopsies and blood tests, leading to its definitive treatment.

Oral Pathology

These Departments are concerned with the evaluation of patient's oral health condition. The primary mission of this department is to provide supervised training to the students on the complete history taking of the patient and performing thorough oral and extra oral examination. On the basis of these records a definitive or differential diagnosis is reached and a proper treatment plan is designed for each patient. The department is equipped with necessary examination instruments and special X-Ray machines to aid in diagnostic procedures. The hospital has installed digital imaging X-Ray machines, where patient's radiographs can be viewed on the computer via internet.

General Surgery & General Medicine

The dental students have to undergo teaching and training in overall concepts of medicine and surgery. The curriculum covers in detail the domains having relevance to the practice of dentistry. FJDC gives great importance to this portion of the course which consumes the major portion of the 3rd year, as this is the only opportunity a dentist would have, throughout their career, to study general medicine and general surgery.

Fatima Jinnah Dental Hospital, has settings for patients presenting with systemic diseases and medical / surgical problems. The primary objective of the faculty is to educate students about expert diagnosis and management of human illness based on the knowledge and preclinical experience. Students of third year are expected to study various health related diseases. They are taught patient management through lectures, history taking, physical examination, laboratory and radiology investigations. This exercise enables them to achieve differential diagnosis and treatment plan for continued evaluation and therapy. Special emphasis is given to endocrinology and blood diseases.

Dental students are made aware of the basic surgical skills and principles. Clinical teaching is provided to students in both general and special surgical areas such as infection, asepsis, tumors, hernia, etc. The students are exposed to a variety of surgical problems where they are expected to check for patient's clinical signs and symptoms under supervision. Occasionally students are introduced to operation theater surroundings to observe sterilizing procedures and operations.

An MoU has been signed between FJDC and Chiniot General Hospital (CGH). This collaboration will enable FJDC's 3rd-year BDS students to gain invaluable clinical exposure and training opportunities within the well-equipped facilities of CGH. This hands-on experience will not only enrich their education but also prepare them for future healthcare challenges.

4th Professional BDS Subjects Conservative (Operative) Dentistry

This department of FJDC is the pride of the entire dental community. The department is the hub of knowledge and clinical training. Since the establishment of the college, it has been known to be the strongest restorative department in the country. The faculty of this specialty travel all over the world to share their researches and demonstrate clinical skills. The post-graduation programs including FCPS, MCPS has produced over 20 post graduates, who are all holding leading positions in dental institutions. The department also provides training in advance dental practice to general practitioners via workshops and clinical attachments. Students learn treatment like dental filling, RCT procedures and other restorative procedures. The department of restorative dentistry includes the operative and endodontic procedures for the restoration of missing or lost tooth structure. It has the responsibility of basic clinical training of the students and house officers / residents. The post graduation component provides advanced clinical training for the FCPS and MCPS program. Students from 3rd year onwards are given exposure to patients coming in for treatment. The mission of this department is to provide proper patient care through advanced procedures. This is accomplished in two ways 1) All the procedures are performed under super-vision and 2) materials such as amalgam, composites, GIC, and fluoride are manipulated using modern and effective techniques. The residents are trained on both manual and rotary endodontic procedures, to keep them up to date with current practice in the various clinical settings.

Orthodontics

The department has a reputation of being dedicated to excellence. The faculty and staff are committed to upholding and enhancing that tradition. The Orthodontics treatment of FJDC attracts patients from all over the city as it is trusted for providing removal and fixed braces and related treatment of international standards on cost to cost basis. Since its inception it has been engaged in teaching, patient care and research.

The curriculum consists of subject matter that has direct application in orthodontic practice. Examples are orthodontic topics covering etiology, diagnosis, and treatment planning; applied clinical orthodontics and dentofacial orthopedics; cephalometrics, and other auxiliary imaging methods; bio-mechanical principles; anatomy; growth and development; surgical orthodontics; craniofacial anomalies; embryology; biostatistics; metallurgy of orthodontic materials etc. Aesthetic cosmetic and reformative dentistry is what orthodontics is all about. It moves mountains to change faces.

Oral & Maxillofacial Surgery

The department of oral and maxillofacial surgery at Fatima Jinnah Dental College and Hospital aims at teaching and training students and residents to perfection in this field. This is accomplished by patient care and emergency services. Training under supervision encompasses the areas of scientific research, dento alveolar surgery, maxillo-facial trauma management, maxillofacial pathology, reconstructive procedures, local and general anesthesia and sedation. Prescription writing with proper dosages of analgesics and antibiotics with their indications and contra-indications are also taught to the students. The department has recently been revamped, increasing and improving the facilities with the addition of new surgical area and dedicated operational theaters to meet the surgical needs of the increasing patient pool.

Prosthodontics

It is one of the major departments in the hospital with large number of patients benefitting from skilled personal and at affordable rates. Within the field of dentistry, considerable significance is attached to dental

prosthetics. It includes partial and complete dentures, crowns, bridges, implants and implant related dentures. The curriculum is structured to deliver information through lectures, seminars, and clinical overview of patient care. We continually review new material and associated techniques to assure appropriately researched new technologies and their incorporation into the training program, while at the same time, using evidence based information which is the core for our teaching procedure. The department is responsible for educating students to be competent in treatment and management of patients who require comprehensive diagnosis, treatment plan and sequence of treatment in general prosthodontic therapy, commonly found in general dental practice. This department is extensively involved in the following areas: The curriculum is centered in biologic diseases, treatment modalities in prosthodontics which include (fixed, removable partial denture, complete denture, implant prosthodontics and esthetic dentistry) and its delivery, within the limitation of available biomaterial support and patient management. It stimulates

students to apply knowledge gained from courses for preclinical problem solving during their preclinical studies as well as clinical problem solving throughout their clinical junior and senior years. Correlation between knowledge gained in different departments is the key to success in prosthodontics.

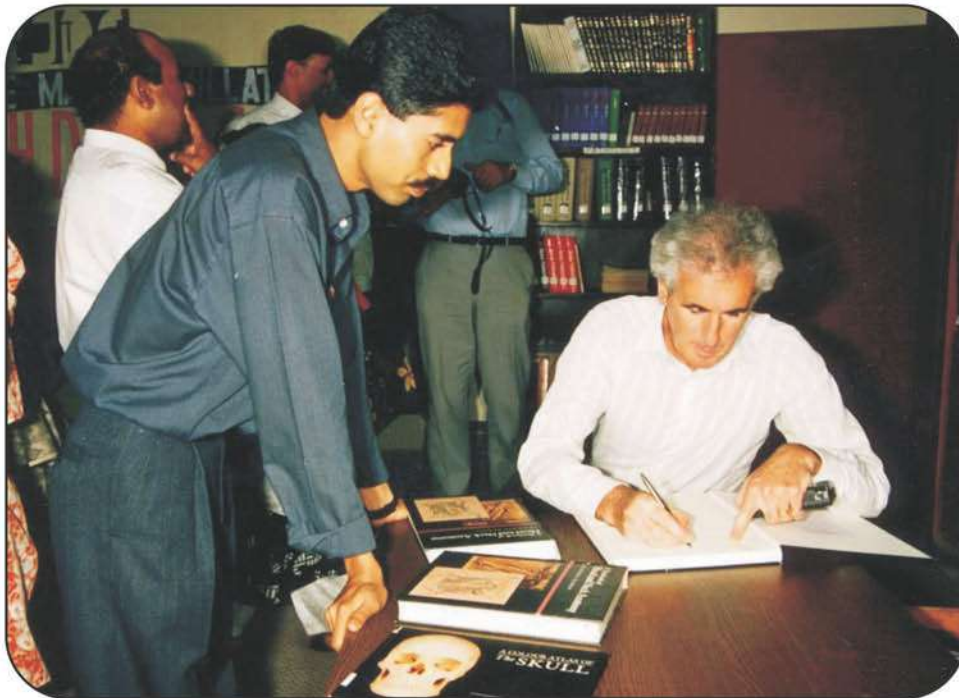

Post Graduate Training Programs

On the establishment of FJDC in 1992, it was realized that there was no worthwhile and effective postgraduate program for dentistry in Pakistan. The five public sector dental colleges functional at that time, were grossly deficient and lacked adequately qualified and sufficiently experienced faculty to supervise postgraduate candidates.

FJDC in 1993 sponsored the Royal College of England to run courses and hold FDS RCS Part I examination in Karachi, in Collaboration with the British Council. This was the first time the Royal College extended these facilities outside U.K.

The Royal College team consisting of Dr. Johan Rayne, Dr. Roger Linden, Dr. B.K.B. Berkovitz and Dr. D.A. Luke, conducted a two month preparatory course before holding the FDS RCS Part I examination. FJDC has a standing offer from the Royal College of England to hold such exercise whenever the need is felt.

It was only then, in 1994, that the CPSP took up post-graduation in dentistry. It is heartening to note that post-graduation in dentistry has, over these years, established its self in Pakistan and sufficient faculty is being produced for its need.

Dr. B.K.B. Berkovitz autographing his text book on Head & Neck Anatomy at FJDC library.

Fatima Jinnah Dental College was recognized for Post graduate teaching programs FCPS and MCPS by College of Physician & Surgeons of Pakistan (CPSP) and Pakistan Medical Dental Council (PMDC) in year 1995. Currently training is offered for FCPS (Fellowship program) in Operative Dentistry. This program is supervised by highly qualified and experienced dental professionals. The trainees of FJDC are known for their skills and unparalleled training experience. Postgraduates of FJDC have outstanding performance; they have occupied numerous key assignments in the country and abroad.

Faculty Development Program (FDP) of Fatima Jinnah Dental College, has produced numerous Professors / Assoc. & Asst. Professors in various basic sciences, medical & dental clinical subjects, with MCPS, FCPS from CPSP and Ph.D., M.Phil., M.S., M.Sc. etc. from various National and International Universities.

Future Plans : Facilities for starting masters program in various other dental and medical, basic and clinical specialties, are in final stage and will commence soon.

The prospective post graduates of Fatima Jinnah Dental College on the march.

The FJDC Faculty

Anatomy

Dr. Sarwath Fatimee

MBBS, M. Phil
Associate Professor & Head
Experience: 18 years
Serving FJDC Since: 2007

Dr. Sameen Ishaat

BDS, M.Phil (Anatomy) – Present
Senior Registrar
Experience: 5 years & 6 months
Serving FJDC Since: Feb, 2023

Dr. Hafiza Hafsa Ejaz

BDS
Lecturer / Demonstrator

Dr. Mahnoor Naveed

BDS
Lecturer / Demonstrator

Dr. Areeba Yaseen

BDS
Lecturer / Demonstrator

Biochemistry

Dr. Syed Munawar Alam

MBBS, M. Phil,
Associate Professor & Head
Experience: 16 years
Serving FJDC Since: Oct, 2015

Dr. Zainab Shaukat Khan

BDS
Lecturer / Demonstrator

Dr. Saman Arif

BDS
Lecturer / Demonstrator

Physiology

Dr. Zeba Hisam

MBBS, FCPS
Assistant Professor & HOD
Experience: 16 years
Serving FJDC Since: Nov, 2011

Dr. Amna Hussain

BDS
Lecturer / Demonstrator

Dr. Misbah Shahzadi

BDS
Lecturer / Demonstrator

Dr. Laiba Shamim

BDS
Lecturer / Demonstrator

Oral Anatomy & Oral Biology

Dr. M. Bilal Bashir

BDS, MDS
Assistant Professor
Experience: 6 year & 3 months
Serving FJDC Since: 2021

Dr. Mahavosh Qazi

BDS, MSc
Senior Registrar
Experience: 4 years & 5 months
Serving FJDC Since: Apr, 2023

Dr. Soha Wahid

BDS
Lecturer / Demonstrator

Dr. Tehreem Sartaj

BDS
Lecturer / Demonstrator

Pathology

Dr. Sabiha Mirza Khan

MBBS, M.Phil
Vice Principal, Pre-Clinical Campus
Assistant Professor & Head
Experience: 34 Years
Serving FJDC Since: 2010

Dr. Laraib Nasir

BDS
Lecturer / Demonstrator

Dr. Zunara Manzoor

BDS
Lecturer / Demonstrator

Dr. Asma Muzaffar

BDS
Lecturer / Demonstrator

Pharmacology

Dr. Faiza Hasan

BDS, M.Phil, Ph.D
Professor & Head
Experience: 16 Years
Serving FJDC Since: Mar, 2020

Dr. Sehrish Arshad

BDS
Lecturer / Demonstrator

Dr. Syeda Hiba Junaid

BDS
Lecturer / Demonstrator

Dr. Sharqa Haider

BDS
Lecturer / Demonstrator

Dr. Marium Iftikhar

BDS
Lecturer / Demonstrator

Science of Dental Material

Dr. Afreen Bilgrami

BDS, MDS
Assistant Professor
Experience: 12 years
Serving FJDC Since: 2018

Dr. Mariam Qamar

BDS
Lecturer / Demonstrator

Dr. Maria Alexandar

BDS
Lecturer / Demonstrator

Community Dentistry

Dr. Syed Hussain Askary

BDS, M.Sc., D.D.P.H. (RCS)
Associate Professor & Head
Chief Executive
Experience: 21 years
Serving FJDC Since: 2004

Dr. Hannah Emmanuel

BDS,
Lecturer / Demonstrator

Dr. Faiza Nazar

BDS
Lecturer / Demonstrator

Dr. Fatima Khan

BDS
Lecturer / Demonstrator

The FJDC Faculty (Continued)

Oral Pathology

Dr. Gul Rukh Askary
BDS, M.Sc.
Associate Professor & Head
Director Academics
Experience: 21 years
Serving FJDC Since: 2004

Dr. Mehwish Ayaz
BDS, M.Phil, MPH
Assistant Professor
Experience: 12 years
Serving FJDC Since: 2011

Dr. Tooba Shakil
BDS
Lecturer / Demonstrator

Dr. Nirmal Afzal Shah
BDS
Lecturer / Demonstrator

General Medicine

Dr. Syed Layeeq Ahmad
MBBS, FCPS
Professor & Head
Department of General Medicine
Experience: 28 years
Serving FJDC Since: 2015

Dr. Attia Anwar
MBBS, MRCP
Senior Registrar
Experience: 23 years
Serving FJDC Since: 2011

Dr. Saeed Akhtar Jafry
MBBS, MCPS
Senior Registrar
Experience: 19 years
Serving FJDC Since: 2011

General Surgery

Dr. Syed Abid Ali
MBBS, FRCS
Professor / Head
Experience: 26 years
Serving FJDC Since: 2016

Dr. Nargis Maqbool
MBBS, FCPS
Senior Registrar
Experience: 7 years
Serving FJDC Since: 2023

Oral Medicine

Dr. Shahrukh Saran
BDS, M.Sc (DS) ongoing;
Senior Registrar
Experience: 11 years
Serving FJDC Since: Jan, 2018

Dr. Nisha Asif
BDS
Lecturer / Demonstrator

Dr. Muhammad Raheel Mughal
BDS
Lecturer / Demonstrator

Dr. Maria Iqbal
BDS
Lecturer / Demonstrator

Integration of Clinical Training Leading to Better Patient Care.

Following the current international trend, FJDC has been working towards de-compartmentalization of the various specialties. Integrated multi disciplinary approach in training and patient care is being adopted. This advanced concept can only be implemented if the boundaries between the departments are made porous, if not completely removed. To achieve this goal FJDC has grouped various specialties into the following divisions.

Restorative Division

Restorative Division

Operative dentistry

Endodontics

Pedodontics

Prosthodontics

Orthodontics

Periodontology

Surgery Division

Oral & Maxillofacial Surgery

Oral Pathology

Oral Medicine

Radiology

General Pathology

Community Service and Volunteering opportunities

Fatima Jinnah Dental College & Hospital Trust, since the last 32 years, has been providing quality medical and dental treatment at subsidized rates. It also provides free checkups and treatment to school children and deprived communities.

Our student volunteers actively contribute to various philanthropic and social causes. Overwhelming participation was seen during fund raising and relief activities for Asian Tsunami, Pakistan floods and earthquake affectees.

FJDC's Community Dentistry Department collaborates with various organizations like Pakistan Dental Association (PDA), Asia Pacific Dental Federation (APDF), International Dental Federation (FDI), International Medical & Educational Trust (IMET), World Health Organization (WHO), The Hunar Foundation (THF), ABSA School for the Deaf and The Indus Hospital, etc.

FJDC SPORTS

The FJDC Motto is to maintain "a healthy mind in a healthy body". The students keenly take part in various sporting activities. Cricket tournaments and night matches are a regular feature. FJDC is also known for equally promoting sporting activities for the female students.

Former Captains of Pakistan Cricket Team Muhammad Yosuf and Inzamam ul Haq are always keen to coach the youngsters.

FJDC Cricket Team with Former Captain of Pakistan Cricket Team, Mohammad Yosuf.

Mr. Qamar Mansoor, Minister for Culture, Tourism, Sports, Youth Affairs, Social Welfare, Government of Sindh, and Dr. S. Baqar Askary, Chairman, FJDC seen in a group photo at the First Women Cricket Tournament, organized by FJDC.

Urooj Mumtaz of FJDC Batch 12 receiving Best Player trophy from Mrs. Manel D'Silva, Honorable Council General, Sri Lanka. Urooj later became Captain of the Pakistan Women's Cricket Team.

Sadia Shabbir Jumani of FJDC Batch XV receiving the championship trophy at the Third National Football Chamionship in 2007.

Sakina Ghulamullah Ansari of FJDC Batch 19 is a National Swimming Champion, at 31st National Games in 2010, won 7 gold medals and 3 silver medals. She represented Pakistan at international swimming competitions such as the FINA World Swimming Championship, Commonwealth Games, Asian Games, South Asian Games and South Asian Swimming Championships. Sakina has won several medals for Pakistan and was the only South Asian swimmer to qualify for the Melbourne Commonwealth Games in 2007. She was also selected as the reserve swimmer for the 2008 Beijing Olympic Games by the International Swimming Federation (FINA).

Dr. S. Baqar Askary is a strong supporter of sports at community level. Here he is seen patronizing famous Pakistani athlete Naseem Hameed, Gold Medalist and South Asia's Fastest Runner at Bhattai Colony.

Podium for Doctors of Tomorrow is an initiative to engage the pre-medical students (Intermediate / A levels) in healthy activities to raise their awareness in the medical / dental field. Providing them with the right of expression. Various activities of this forum ensures that the participants explore their hidden talents.

Renowned medical professionals, medical educationists and experts, provide career counseling and one to one mentoring to students seeking a career in the healthcare industry.

PODIUM

For Doctors of Tomorrow

Become A Member Today

- ▶ Get Career Counseling.
- ▶ Get invited to many events.
- ▶ Meet prominent personalities.
- ▶ Take part in exciting activities.
- ▶ Get a platform to express yourself.
- ▶ Increase social / professional network.

Inter-college competitions are planned to give the future doctors opportunities to exercise various skills they will need, to first get into and then succeed in a medical / dental college.

To date, Podium has over 2000 active members taking part in its various activities and events. The goal of this platform is to enable the youth to overcome shyness, develop self confidence, practice communication skills. Make new friends. Overcome the fear of making mistakes. Learn to enjoy life.
